The real power behind Fujitsu's 8-bit MCUs is the fact they hardly use any.

Thanks to our low-voltage, low-leakage yet high-speed designs, Fujitsu is the preferred choice in power-conscious MCUs. Glucose monitors, home theatre remotes, security systems, and thermostat controls are just a few examples of the hundreds of applications where our new, expanded 8-bit MCUs have found a home. But this preference is no accident. We understand better than anyone the price, performance and space challenges faced by engineers, and the end result is a design architecture unrivaled in its power and flexibility. What's more, working with Fujitsu offers world-class manufacturing and a proven track record of reliability. For more on Fujitsu's MCUs and our industry-leading solutions, visit **www.fma.fujitsu.com/mcuad** or call **(800) 866-8608.**
